For PTX5 REMOTE coding

The remote replacement compatible with PTX5V1, and BND Tritran, please know it can not compatible with PTX5V2 Tritran+

Choose the remote you want like this :

press and hold the   NO.1 and NO. 2 at the same time ,you will see LED light on ,and keep it till the led indicator light off ,that mean it has been change to be another code . (default is ptx5v1 ATA)

Storing remote code

1. Press and hold the SW1 or SW2 on the receiver , the LED will flash.

2. Press one remote button which you want to desire to the receiver for 2 seconds, you will find the LED indicator will flash faster it means code in successful.

3. Release the SW1or SW2 button and after 2 seconds , press the remote button which you have desired just now and test it on receiver. You will find the LED light on steadily for a few seconds and then off. Now coding finished, you can control now.
